

Engineering change

The Engenda Group was formed with the aim of providing a fresh and innovative approach in the delivery of essential outsourced engineering services to the power, oil and gas, manufacturing and infrastructures sectors both in the UK and overseas.

The Group is being progressively formed through a careful and selective acquisition strategy. The acquired companies are integrated and supported by a cross business professional services organisation with manufacturing, asset care, maintenance, outage management and project management experience.

This in house team is complemented by a network of associates that have similar skills and expertise and many years experience working with the Engenda senior management team on customer change management assignments.

Engenda is building an impressive reputation within the maintenance and construction arenas both in the UK and overseas for value adding engineering services underpinned by the desire to deliver reduction in our customer's fixed costs, improvement in asset availability and life-cycle cost performance. A reputation for delivering high quality, technically advanced, reliable facilities and equipment on time, on budget and with a world-class safety record.

Our differentiators

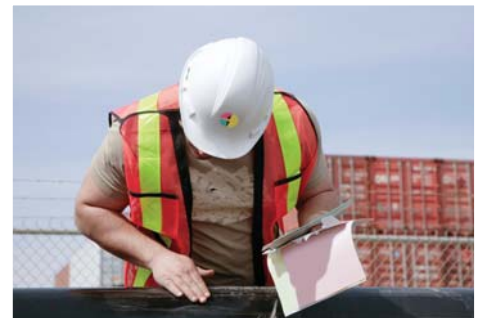

- The senior management team within the Group have many years experience of working on both the customer and supplier sides of the fence. We recognise the impact of mediocre supplier performance on our customers operations and in doing so, strive to excel in every aspect of our business and approach every challenge with a determination to succeed
- As manufacturers have downsized, in some case resulting in loss of tacit knowledge, Engenda have recruited an engineering management team that can fill the void that many of our competitors fail to recognise. Our teams have delivered challenging change programmes within our customers organisations, operating as intelligent partners rather than instructed suppliers
- We at Engenda recognise the increasing challenges facing manufacturing operations in the UK, and tailor our approach accordingly. Our target profitability is inherently linked to the value delivered
- The Group infrastructure has been formed with the ability to flex with none core services outsourced. This provides Engenda with a minimum, and variable operating overhead that provides a commercial advantage that is passed on to our customers

Our Vision

“To be recognised as the market leader in the provision of essential, value adding engineering services”

- We will be valued by our customers and stakeholders as an organisation that is powered by innovation and founded on a reputation of trust, integrity and ethical business practices
- We will be viewed as the employer of choice and on this basis will recruit and retain the most talented, values-driven people into the organisation
- We will deliver a sustainable world class health, safety and environmental performance that will result in zero harm to our stakeholders and the environment. This will underpin our ability to thrive in a global market where customers rightly view safety as a decisive factor in the selection of their suppliers

Services offered within the Group

We offer a complete range of services to help our clients maintain a competitive edge in their respective markets. From feasibility studies and planning to operational work management. We customize our services to meet your business and project goals.

Project engineering and innovative engineering design - Our clients look to Engenda to integrate the activities of the engineering, procurement, and construction functions to meet their requirements.

Maintenance and work management consultancy services - Focused on plant maintenance, facility management, operations support, asset performance improvement, operations readiness, start-up and commissioning, and small capital project design and construction.

Outage and turnaround support services - To help plant and facility owners reduce outage costs and increase plant productivity through Engenda's Asset Planning and Performance Improvement (APPI) assessment process.

High voltage installation and testing – Installation and commissioning from 400V to 33kV electrical distribution equipment including LV switch boards, transformers, unit substations, switchgear and associated jointing, maintenance, fault location and repair.

Process control and instrumentation systems - Design, installation, testing and commissioning of batch or continuous control systems, with in-house capability for software engineering and associated control panel manufacture.

Full complement of electrical installation, testing and inspection services - This includes HV, MV, LV distribution systems, lighting, small power, gas detection, CCTV and access control systems, portable appliance testing and complex hazardous area inspections.

Our clients include

- ConocoPhillips • Knauf • Millennium Chemicals • Unilever • Brenntag • Hydro Energy • ABP • Total • BOC • Alstom • Veolia • EcoLab
- Harco • Siemens • Cytec • Feralco • Exel • Simon Storage • Carillion • Fluor • Huntsman Tioxide • Walls • Centrica • Clariant • Saint Gobain
