CONFINED SPACE & HEIGHT RESCUE SERVICES

Engineering change

CONFINED SPACE SEARCH AND RESCUE / RESCUE PLANNING / EMERGENCY RESCUE

With an inherent knowledge of industrial operating environments, Engenda Group can provide a competent rescue service.

Operatives working in both confined spaces and at height face sources of risk which must be appropriately identified and addressed.

Engenda Group rescue teams are highly trained and have an inherent knowledge of industrial operating environments. Specialising in the rescue of operatives in confined spaces or at height, our teams are able to satisfy legislative requirements for rescue provision.

Many organisational rescue plans are based around "dynamic risk assessment" at the point of the event. Engenda Group will conduct rescue plans, risk and entry method statements in advance of providing specialist rescue services with a focus on legislative preparedness and rescue standby.

Team members are equipped with bespoke rescue and medical equipment so that operatives can perform tasks safe in the knowledge that experienced rescuers are on hand to intervene at the point of any incident.

Engenda Group also has a bespoke training facility offering confined space and height rescue training. The facility is regularly utilised by our client's Fire and Rescue personnel.
